The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at teast one biological activity of a cell. PRO polypeptide are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptides or coll expressing PRO polypeptides. The PRO polypeptides or polynucleotides are useful for stimulating hypertrophy of neonatal increases in hibiting ascular endothelial growth factor (WGP) etimulated proliferation of endothelial cells, modulating the proliferation of the proliferation of endothelial cells, inducing proliferation of cells, modulating glucose or PRA uptake, inducing proliferation and/or reduced, modulating plucose or PRA uptake, inducing proliferation and/or reduced; proliferation of chondrocytes, enhancing the survival or proliferation and/or reduced; modulating plucose or PRA uptake, inducing proliferation and/or reduced; modulating plucose or proliferation of cells, modulating plucose or proliferation and/or reduced; modulating plucose or proliferation and/or reduced; modulating proliferation of or ethinal disorders or injuries (e.g. loss of sight due to cells, modulating proliferation and/or reduced; modulating proliferation and/or reduced; modulating proliferation of proliferation of conditions and proteins and proteins affect the spreasing reduced; proliferation of sight due to cumours, reinfal disorders or injuries or still provide and proliferation of genes which have a role in cell death. The polymucleotides or cDNA, in chromosome and gene mapping, in the generation of antisense RNA companies of the proliferation of antisense RNA companies. The proliferation of antisense reduced in the protein and for chromosome identification. The pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ashkenazi A, Bot

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a

XC ADC403 밁 CC polypeptide antibodies are useful for modulating the biological activity CC of a cell expressing RRO polypeptides. The PRO polypeptides or CC polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC bioreactors. These are useful for stimulating the biological activity CC polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC bioreactors. These are useful for stimulating hypertrophy of meonatal CC proliferation of endothelial cells, modulating thypertrophy of meonatal CC cells, inhibiting vascular endothelial growth factor (VEGP)-stimulated CC cells, inhibiting vascular endothelial growth factor (VEGP)-stimulated CC cells, modulating glucose or FRA uptake, inducing c-fos in endothelial CC cells, modulating glucose or FRA uptake, inducing proliferation of conditions of conditions and/or reconstitus properties of the survival or these are useful for CC cells, retinitis pigenctosum), obesity, diabetes, hyperinsulinaemia, cancerous CC tumours, retinal disorders or injuries (e.g. loss of sight due to retinitis pigenctosum), obesity, diabetes, hyperinsulinaemia, cancerous CC archaritis) in mammals. PRO polypeptides and their portions affect the CC expression of genes which have a role in cell death. The polymucleotides CC are useful in molecular biology including uses as hybridisation probee CC expression of genes and gene mapping, in the generation of antisense RNA CC and DNA, for preparing PRO polypeptides, for generating transgenic CC animals or knockout animals with gene useful in the development and sortened and proteins and for the development and sortened and proteins are useful as molecular marker for protein electrophoresis CC genetic analysis of individuals with genetic disorders as well as for the proteins are useful in the development and cor the proteins are useful as molecular marker for protein electrophoresis cancerous and the proteins are useful for the proteins are useful as moleculars are useful for the proteins are useful and for affinity cantilogies. Ashkenazi A, Botstein Filvaroff E, Fong S, Godowski PJ, Grimaldi Mather JP, Pan J, Pao Williams PM, Wood WI; Botstein D, Desnoyers L, Eaton DL, Fong S, Gao W, Gerber H, Gerritsen Grimaldi JC, Gurney AL, Hillan KJ, an J, Paoni NF, Roy MA, Stewart TA, Perrara N; n ME, Goddard ; Kljavin IJ; , Tumas D; Þ

Novel secreted and transmembrane polypeptides and polynucleotides encoding them useful for treating skin, neurodegenerative diseases, antithrombotic agent and for inducing endothelial cell apoptosis. WPI; 2003-540676/51. as an

Example 42; SEQ ID NO 286; 473pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides can and the nucleic acid encoding them. The polypeptides can be used to raise can the nucleic acid encoding them. The polypeptides can be used to raise can be discative molecule to a cell expressing a PRO polypeptide, for linking a compositive molecule to a cell expressing a PRO protein and for modulating complexity of a cell. PRO polypeptides are useful for modulating the biological activity of a cell. PRO polypeptides or linking a cell expressing the biological activity of a cell. PRO polypeptides or linking a cell expressing a PRO polypeptide. The PRO polypeptides or cell expressing PRO polypeptides for modulating the biological activity cof a cell expressing properties. These are useful for stimulating the biological activity cof each expressing PRO polypeptides or polypeptides or cell expressing PRO polypeptides or cell expressing for endothelial growth factor (VEGF)-stimulated returned or endothelial cells, modulating the proliferation of cells, inducing proliferation of cells, modulating the proliferation of cells, modulating the proliferation of cells, inducing proliferation of cells, modulating the proliferation of cells, inducing proliferation of cells, modulating the proliferation of cells, modulating the proliferation of cells, modulating the proliferation of cells, modulating the proliferation of cells, modulati

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               those that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for immunchistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The PRO genes may also be used in gene therapy, particularly for replacing a defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                17-SEP-1997;

The invention discloses isolated PRO secreted/transmembrane polypeptides and the mucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating contrive molecule to a cell expressing a PRO polypeptide. The PRO polypeptides are useful for a cell expressing a PRO polypeptide activity of a cell expressing a PRO polypeptide. The PRO polypeptides are useful for stimulating the biological activity of a cell expressing a PRO polypeptides are useful for polypeptides. The PRO polypeptides are useful for stimulating the biological activity of a cell expressing PRO polypeptides are useful for stimulating the proliferation of endothelial cells, modulating the proliferation of polypeptides are useful for stimulating protein and/or recells, modulating glucose or PRA uptake, inducing c-fos in endothelial cells, modulating the proliferation of cells, modulating the proliferation of cells, modulating proliferation of cells, modulating proliferation of cells, retinal neurons or rot photoreceptor cells, inducing proliferation and/or recells, modulating glucose or PRA uptake, inducing proliferation and/or recells, modulating glucose or PRA uptake, inducing proliferation and/or recells, modulating glucose or PRA uptake, inducing proliferation of cells, modulating glucose or PRA uptake, inducing proliferation and/or recentration of chondrocytes. In particular, these are useful for cells, modulating disorders or injuries (e.g., loss of sight due to creating retinal disorders or inpuries (e.g., loss of sight due to retinal modulating properties and their portions affect the expression of genes which have a role in cell death. The polynucleotides are useful in molecular biology including uses as hybridisation of antisense RNA and DNA, for peparing PRO polypeptides, for generating transgenic cannals or knockout animals which are useful in the development and correct analysis of individuals w

Novel secreted and transmembrane polypeptides and polynucleotides encoding them useful for treating cancers, asthma, rheumatoid arthritis, neurological diseases, and skin diseases. encoding them useful for neurological diseases,

Example 42; SEQ ID NO 286; 478pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bloactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide are useful for modulating the biological activity of a cell expressing the biological activity of a cell expressing a PRO polypeptides or polymucleotides are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothelial growth factor (VEGF)-stimulated proliferation of endothelial cells, modulating the proliferation of stimulated T-lymphocytes, enhancing the survival or proliferation of

```
continuing, retinal disorders or injuries (e.g. loss of sight due to cretinitis pigmentosum), obseity, diabetes, hyperinsulinaemia, cor bone or cartilage disorders (e.g. sports injuries or chypoinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or carthritis) in mammals. PRO polypeptides and their portions affect the carthritis) in mammals. PRO polypeptides and their portions affect the carthritis or in mammals. PRO polypeptides and their portions affect the carthritis or in molecular biology including uses as hybridisation probes for cDNA, library to isolate the full-length PRO cDNA or to isolate other cDNAs, in chromosome and gene mapping, in the generation of antisense RNA cand DNA, for preparing PRO polypeptides, for generating transgenic canimals or knockout animals which are useful in the development and cor secenting of therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for crecombinantly expressing the protein and for chromosome identification. The proteins are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists) or prevent the effect of the PRO polypeptide (antagonists) or prevent the effect of cuseful for tissue typing. PRO antibodies are useful for cuseful for tissue typing and/or assay of sample fluids. Anti-PRO continuonohistochemical staining and/or assay of sample fluids. Anti-PRO cuseful for the protein electring its capture or natural sources. The printing and or secondarily particularly for replacing a companity a PRO polymence presented is a PCR primer which was used to defective gene. The sequence presented is a PCR primer which was used to amplify a PRO polymedicatide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   retinal neurons or rod photoreceptor cells, inducing c-fos in endothelial cells, modulating glucose or FPA uptake, inducing proliferation and/or re-differentiation of chondrocytes, particular, these are useful for detecting or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia,

Novel isolated PRO polypeptides e.g. PRO234 (useful for treating rheumatoid arthritis, psoriasis and multiple sclerosis) and PRO187 (useful for treating Alzheimer's disease, cancer).

Example SEQ ID NO 286; 451pp; English

The invention discloses isolated PRO secreted/transmembrane polypeptides can thouse and the nucleic acid encoding them. The polypeptides can be used to raise can thouse that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO polypeptide. The linking a complex to the PRO polypeptide are useful for detecting other PRO polypeptides in a sample and for modulating compoundative molecule to a cell expressing a PRO polypeptide. The PRO colypeptide are useful for modulating the biological activity of a cell propertide are useful for modulating the biological activity of a cell expressing pRO polypeptides or colymucleotides are useful for stimulating hypertrophy of neonatal theart, inhibiting vascular endothelial growth factor (PEGP) stimulated proliferation of endothelial cells, inducing the proliferation of compoundating plucose or PRA uptake, inducing proliferation of cells, modulating proliferation of cells, not provide cells, modulating proliferation of cells, not provide cells, modulating proliferation of cells, not provide cells, modulating proliferation of seports injuries or retaining of the proposition of injuries or injuries (e.g., loss of sight due to remove the proposition of genes which have a role in cell death. The polymucleotides or knockout animals which are useful expression in sp purification of PRO genes may al from recombinant be used in gene t therapy, particularly replacing Ø

                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 1482
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC detecting or treating cardiac insufficiency disorders, wounds, cancerous CC tumours, retinal disorders or injuries (e.g. loss of sight due to CC retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, or bone or carrilage disorders (e.g. sports injuries or CC hypoinsulinaemia, or bone or carrilage disorders (e.g. sports injuries or CC arthritis) in mammals. PRO polypeptides and their portions affect the CC expression of genes which have a role in cell death. The polynucleotides CC are useful in molecular biology including uses as hybridisation probes CC are useful in thoraxy to isolate the full-length PRO cDNA or to isolate other CC conna, in chromosome and gene mapping, in the generation of antisense RNA CC and DNA, for preparing PRO polypeptides, for generating transgenic CC animals or knockout animals which are useful in the development and CC genetic analysis of individuals with genetic disorders as well as for CC genetic analysis of individuals with genetic disorders as well as for CC genetic analysis of individuals with genetic disorders as well as for CC insumation of the protein as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify CC those that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for cuseful for tissue typing and/or assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity CC purisication of PRO from recombinant cell culture or natural sources. The CC genes may also be used in gene therapy, particularly for replacing a CC defective gene. The sequence presented is a PCR primer which was used to complify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide for linking a CC bloactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for linking a CC bloactive molecule to a cell expressing a PRO polypeptide. The PRO CC polypeptide antibodies are useful for modulating the biological activity CC of a cell expressing PRO polypeptides or CC polynucleotides are useful for modulating the biological activity CC of a cell expressing PRO polypeptides or CC polynucleotides are useful as pharmaceuticals, diagnostics, biosensors or CC bioreactors. These are useful for stimulating hypertrophy of neonatal CC heart, inhibiting vascular endothelial growth factor (VEGP)-stimulated CC proliferation of endothelial cells, modulating the proliferation of CC stimulated T-lymphocytes, enhancing the survival or proliferation of CC cells, modulating glucose or FFA uptake, inducing proliferation and/or redifferentiation of chondrocytes. In particular, these are useful for CC detection or treating of conditions in endothelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

Novel PRO polypeptides useful for treating Parkinson's disease, Alzheimer's disease, enterocolitis, Zollinger-Ellison syndrome, psoriasis, epidermoid carcinoma of the vulva and gliomas, gynecological diseases.

Example 42; SEQ ID NO 286; 473pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide, for linking a CC bloactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for linking a CC bloactive molecule to a cell expressing a PRO polypeptides. The PRO CC of a cell expressing PRO polypeptides or modulating the biological activity CC of a cell expressing PRO polypeptides. The PRO CC polynucleotides are useful for stimulating the biological activity CC of a cell expressing PRO polypeptides. The PRO CC polynucleotides are useful as pharmaceutical, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal CC heart, inhibiting vascular endothelial growth factor (VEGF)-stimulated CC proliferation of endothelial cells, modulating the proliferation of cells, inducing the proliferation of cells, modulating the proliferation of cells, modulating the proliferation of cells, inducing proliferation and/or recells, modulating glucose or FPA uptake, inducing proliferation and/or recells, modulating gladical insufficiency disorders, wounds, cancerous cutmours, retinal disorders or injuries (e.g. loss of sight due to cellinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or cartilage d retinitis pigmentosum), obesity, retinitis pigmentosum) obesity, retinitis pigmentosum)

                                           CC CDNAB, in chromosome and gene mapping, in the generation of antisense RNA CC animals or knockout animals which are useful in the development and CC animals or knockout animals which are useful in the development and CC screening of therapeutically useful reagents, as probes and for the CC genetic analysis of individuals with genetic disorders as well as for CC recombinantly expressing the protein and for chromosome identification. CC The proteins are useful as molecular marker for protein electrophoresis comproses, as therapeutic agents, for screening compounds to identify CC those that mimic the PRO polypeptide (antagonists). The polymuclectides and proteins are useful for tissue typing. PRO antibodies are useful for cimmunohistochemical staining and/or assay of sample fliids. Anti-PRO CC antibodies are useful in diagnostic assays for PRO e.g. detecting its CC expression in specific cells, tissues or serum and for affinity CC expression of PRO from recombinant cell culture or natural sources. The CC genes may also be used in gene therapy, particularly for replacing a CC amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               arthritis) in mammals. PRO polypeptides and their portions affect the expression of genes which have a role in cell death. The polynucleotic are useful in molecular biology including uses as hybridisation probes for cDNA library to isolate the full-length PRO cDNA or to isolate out
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               other

Novel isolated PRO polypeptide useful for treating Parkinson's disease, enterocolitis, Zollinger-Ellison syndrome, gastrointestinal ulceration, Alzheimer's disease, amyotrophic lateral sclerosis.

Example SEQ ID NO 286; 478pp; English

The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO polypeptide and for modulating at least one biological activity of a cell. PRO polypeptide are useful CC for detecting other PRO polypeptides in a sample and for modulating a bloactive molecule to a cell expressing a PRO polypeptide activity CC of a cell expressing PRO polypeptides in a sample and for linking a CC polypeptide antibodies are useful for modulating the biological activity CC of a cell expressing PRO polypeptides. The PRO polypeptide or CC polynucleotides are useful for stimulating hypertrophy of neonatal CC heart, inhibiting vascular endothelial growth factor (VEGF) stimulated Trimphocytes, enhancing the survival or proliferation of collis, modulating glucose or FRA uptake, inducing cross in endothelial cells, modulating the proliferation and/or recells, modulating or treating glucose or FRA uptake, inducing proliferation and/or recells, modulating proliferation and/or recells, retinal disorders or injuries (e.g. loss of sight due to cretinits pigmentosum), obesity, diabetes, hyperinsulinaemia, cancerous contricts pigmentosum), obesity, diabetes, hyperinsulinaemia, which have a role in call death. The nolyunicleotides or cartifices and their portions affect the conversion of genes which have a role in call death. The nolyunicleotides or cartifices and their portions affect the conversion of cartifices and their portions affect the conversion of cartifices and their portions affect the conversion of cartifices and their portions affect the cartesion of cartifices and their portions affect the cartesion of cartifices and their portions affect the cartification. contributing the control of carthritis in mammals. PRO polypeptides and their portions affect the CC expression of genes which have a role in cell death. The polynucleotides control of cells, in molecular biology including uses as hybridisation probes for cDNA library to isolate the full-length pRO cDNA or to isolate other CC cDNAs, in chromosome and gene mapping, in the generation of antisense RNA cand DNA, for preparing PRO polypeptides, for generation transgenic canimals or knockout animals which are useful in the development and control of therapeutically useful reagents, as probes and for the genetic disorders as well as for crecombinantly expressing the protein and for chromosome identification. The proteins are useful as molecular marker for protein electrophoresis chart mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for tissue typing. PRO antibodies are useful for staining and/or assay of sample fluids. Anti-PRO cantibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The profession and proteins are useful for replacing a defective gene. The sequence presented is a PCR primer which was used to camplify a PRO polynucleotide of the invention.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise
                                                       Novel isolated PRO polypeptides e.g. PRO245 and PRO1868, useful for treating e.g. Parkinson's disease, Alzheimer's disease, amyotrophic lateral sclerosis, cancer, neuropathies, diabetes and psoriasis.
                                  Example 42; SEQ ID NO 286; 476pp; English

CC antibodies that specifically bind to the PRO polypeptide, for linking a CD bloactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful CC for detecting other PRO polypeptides in a sample and for linking a CC bloactive molecule to a cell expressing a PRO polypeptide. The PRO CC polypeptide antibodies are useful for modulating the biological activity CC of a cell expressing PRO polypeptides. The PRO polypeptides or CC polynucleotides are useful for stimulating hypertrophy of neonatal CC proliferation of endothelial cells, modulating hypertrophy of neonatal CC proliferation of endothelial cells, modulating the proliferation of CC stimulated T-lymphocytes, enhancing the survival or proliferation of CC etinal neurons or rod photoreceptor cells, inducing c-fos in endothelial CC cells, modulating glucose or FRA uptake, inducing proliferation and/or receits, modulating or treating cardiac insufficiency disorders, wounds, cancerous CC detecting or treating cardiac insufficiency disorders, wounds, cancerous CC tumours, retinal disorders or injuries (e.g. loss of sight due to proliferation and proposed contributes) in mammals proliferation and proliferations injuries or arthiris in mammals. PRO polypertides and their profiles in furties or arthiris in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cc arthritis) in mammals. PRO polypeptides and their portions affect the capression of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridisation probes cc for cDNA library to isolate the full-length PRO cDNA or to isolate other cDNAs, in chromosome and gene mapping, in the generation of antisense RNA cc and DNA, for preparing PRO polypeptides, for generation of antisense RNA cc animals or knockout animals which are useful in the development and cc genetic analysis of individuals with genetic disorders as well as for cc genetic analysis of individuals with genetic disorders as well as for cc genetic analysis of individuals with genetic disorders as well as for cc genetic analysis of polypeptide as molecular marker for protein electrophoresis comproses, as therapeutic agents, for screening compounds to identify those that mimic the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polymucleotides and proteins are useful for tissue typing. PRO antibodies are useful for communohistochemical staining and/or assay of sample fluids. Anti-PRO cc immunohistochemical staining and/or assay of sample fluids. Anti-PRO cc expression in specific cells, tissues or serum and for affinity comparison of PRO from recombinant cell culture or natural sources. The CR portion of PRO be used in gene therapy, particularly for replacing a compalify a PRO polymucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Novel isolated secreted and transmembrane PRO polypeptides e.g. PRO245 and PRO1868, useful for treating e.g. Parkinson's disease, Alzheimer's disease, amyotropic lateral sclerosis, cancer, neuropathies, diabetes a and

Example 42; SEQ ID NO 286; 473pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides CC and the nucleic acid encoding them. The polypeptides can be used to raise CC antibodies that specifically bind to the PRO polypeptide, for linking a CC bioactive molecule to a cell expressing a PRO protein and for modulating CC at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a CC bioactive molecule to a cell expressing a PRO polypeptides are useful for modulating the biological activity CC of a cell expressing PRO polypeptides. The PRO CC polypucleotides are useful as pharmaceuticals, disgnostics, biosensors or cc polynucleotides are useful for stimulating the biological activity CC of a cell expressing PRO polypeptides. The PRO CC polynucleotides are useful as pharmaceuticals, disgnostics, biosensors or cc polynucleotides are useful for stimulating the properties or cc pinitial growth factor (VRGP) -stimulated CC proliferation of endothelial cells, modulating the proliferation of cc stimulated T-lymphocytes, enhancing the survival or proliferation of cells, modulating the proliferation of cells, modulating the proliferation of cells, modulating creation and/or redifferentiation of chondrocytes. In particular, these are useful for cetinal neurons or rod photoreceptor cells, inducing proliferation and/or redifferential disorders or injuries (e.g. loss of sight due to cells, proliferation of sight due to cells, inducing cells are useful for a hypoinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or are useful in molecular biology including uses as hybridisation probes for cDNA library to isolate the full-length PRO CDNA or to isolate other countries and cent entire the centers con antisense RNA countries and center mapping. In the generation of antisense RNA countries and center entire the center the countries and center entire the center the center countries and center entire the center the center center and center and center the cen DNA, ä n chromosome and gene mapping, in the generation of antisense RNA for preparing PRO polypeptides, for generating transgenic or knockout animals which are useful in the development and

문 გ cc genetic analysis of individuals with genetic disorders as well as for cecombinantly expressing the protein and for chromosome identification. Cc The proteins are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify cthose that minic the PRO polypeptide (agonists) or prevent the effect of cc the PRO polypeptide (antagonists). The polynucleotides and proteins are useful for tissue typing. PRO antibodies are useful for c immunohistochemical staining and/or assay of sample fluids. Anti-PRO cantibodies are useful in diagnostic assays for PRO e.g. detecting its cxpression in specific cells, tissues or serum and for affinity converses of professional cells, tissues or serum and for affinity approached say also be used in gene therapy, particularly for replacing a cc defective gene. The sequence presented is a PCR primer which was used to camplify a PRO polynucleotide of the invention. New secreted transmembrane PRO polypeptides and nucleic acids encoding the polypeptides, useful in gene therapy, in identifying chromosomes, chromosome markers, in generating probes and in tissue typing. as

Example 42; SEQ ID NO 286; 487pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides can the nucleic acid encoding them. The polypeptides can be used to raise can thouse that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO polypeptide. The Inking a condition of the PRO polypeptides are useful for detecting the properties in a sample and for inking a collective molecule to a cell expressing a PRO polypeptide. The PRO collective molecule to a cell expressing a PRO polypeptide activity of a cell expressing a PRO polypeptide. The PRO collective molecule to a cell expressing a PRO polypeptides or collective molecule to a cell expressing a PRO polypeptides or collective. These are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO collective molecular endothelial growth factor (PEGP) stimulated bioreactors. These are useful for stimulating hypertrophy of noonatal heart, inhibiting vascular endothelial growth factor (PEGP) stimulated proliferation of endothelial cells, modulating the proliferation of cells, modulating proliferation of cells, inducing c-fee in endothelial cells, modulating proliferation of sports injuries or proliferation of cells, inducing c-fee in endothelial cells and process and their protions affect the cells, inducing c-fee in endothelial cells and proce PRO genes may also be used defective gene. The sequence b PRO p also be used in gene therapy, particularly e. The sequence presented is a PCR primer whe polynucleotide of the invention. or natural sources. cularly for replacing which was used to B

T Novel isolated native PRO polypeptide useful for tissue typing, modulating biological activity of cell, as molecular weight markers in T modulating biological activity of cell, as molecular weight markers in T syndrome.

Example 42; SEQ ID NO 286; 474pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bioactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity

CC The proteins are useful as molecular marker for protein electrophoresis CC purposes, as therapeutic agents, for screening compounds to identify CC those that mimic the PRO polypeptide (agonists) or prevent the effect of CC the PRO polypeptide (antagonists). The polymuclectides and proteins are CC immunohistochemical staining and/or assay of sample fluids. Anti-PRO CC antibodies are useful in diagnostic assays for PRO e.g. detecting its CC expression in specific cells, tissues or serum and for affinity CC expression in specific cells, tissues or serum and for affinity CC expression of PRO from recombinant cell culture or natural sources. The CC purification of PRO from recombinant particularly for replacing a CC defective gene. The sequence presented is a PCR primer which was used to CC amplify a PRO polymucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

differentiation of chondrocytes. In particular, these are useful for
detecting or treating cardiac insufficiency disorders, wounds, cancerous
tumours, retinal disorders or injuries (e.g. loss of sight due to
retinitis pigmentosum), obesity, diabetes, hyperinsulinaemia,
hypoinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or
arthritis) in mammals. PRO polypeptides and their portions affect the
expression of genes which have a role in cell death. The polymucleotides
are useful in molecular biology including uses as hybridisation probes
for CDNA library to isolate the full-length PRO CDNA or to isolate other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for cD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   proliferation of endothelial cells, modulating the proliferation of stimulated T-lymphocytes, enhancing the survival or proliferation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of a cell expressing PRO polypeptides. The PRO polypeptides or polymented are useful as pharmaceuticals, diagnostics, biosensors bioreactors. These are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothelial growth factor (VEGF)-stimulated
                                                                                                                                                                                                                                                                                                                         Human secreted/transmembrane protein, #53, PCR primer #1.

disease, entulceration, syndrome isolated native PR se, enterocolitis, ation, Alzheimer's PRO polypeptide useful for treating Parkinson's s, Zollinger-Ellison syndrome gastrointestinal's disease, amyotrophic lateral sclerosis, Usher

Example 42; SEQ ID NO 286; 487pp; English.

CC and the nucleic acid encoding them. The polypeptides can be used to raise continuing the nucleic acid encoding them. The polypeptides can be used to raise continuing a compound to the PRO polypeptide, for linking a compound to the properties of the properties of the properties are useful continuing and continuing a compound to the properties and for modulating compolypeptide antibodies are useful for modulating the biological activity of a cell. PRO polypeptide and for linking a complex properties or continuing a cell expressing a properties and for linking a cell expressing the properties or polypeptide and for linking a cell expressing properties. The properties or continuing the properties or polypeptide are useful for modulating the biological activity of a cell expressing properties. The properties or continuing the properties or polypeptides or polypeptides or polypeptides or polypeptides or cell expressing properties, biosensors or continuing the properties of the manufacture of the properties of the properties of the manufacture of the properties of the properties, and the survival or proliferation of cells, modulating the protest in endothelial cells, modulating the proliferation of cells, modulating proliferation and/or receptions, retinal disorders or ripuries (e.g. proposes) as proposes and their portions affect the cells, modulating proliferation probes cells, modulating proliferation probes cells, provided to the cells and cells and cells as h

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       useful for tissue typing. PRO antibodies are useful for immunohistochemical staining and/or assay of sample fluids. Anti-PRO antibodies are useful in diagnostic assays for PRO e.g. detecting its expression in specific cells, tissues or serum and for affinity purification of PRO from recombinant cell culture or natural sources. The genes may also be used in gene therapy, particularly for replacing defective gene. The sequence presented is a PCR primer which was used the amplify a PRO polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human secreted/transmembrane protein, #53, PCR primer

Novel isolated native PRO polypeptide useful for tissue typing, modulating biological activity of cell, as molecular weight markers in protein electrophoresis, for treating enterocolitis, Zollinger-Ellison

Example 42; SEQ ID NO 286; 472pp; English

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise and the nucleic acid encoding them. The polypeptides can be used to raise and the nucleic acid encoding them. The polypeptides can be used to raise can be useful to detecting other PRO polypeptides in a populating the biological activity of detecting other PRO polypeptides in a populating the biological activity of a cell expressing PRO polypeptides are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or collynucleotides are useful for stimulating hypertrophy of neonateal theart, inhibiting vascular endothelial growth factor (VEGP)-stimulated proliferation of endothelial cells, modulating hypertrophy of neonateal cells, inhibiting vascular endothelial growth factor (VEGP)-stimulated proliferation of chondrovets, enhancing the survival or proliferation of cells, modulating glucose or PPA uptake, inducing proliferation and/or recells, modulating glucose or PPA uptake, inducing proliferation of cells, modulating can cere useful for detecting or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to retinate promotories, proposition of genes which have a role in cell death. The polynucleotides are useful in molecular biology including uses as hybridisation probes or cartilage disorders (e.g. sports injuries or connection, in chromosome and gene mapping, in the generation of antisense RNA can bus, for proparing PRO polypeptides are useful in the development and concentrate analysis of individuals with genetic disorders as well as for the protein are useful as molecular marker for protein electrophoresis commonitatochemical staining and/or assay of sample fullid

The invention relates to short interfering nucleic acids (siNA) which downregulate expression of the human c-fos gene by RNA interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the c-fos gene in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the

The invention relates to short interfering nucleic acids (siNA) which CC downregulate expression of the human c-fos gene by RNA interference. The CC siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or CC alternatively are assembled from a sense oligonucleotide and an antisense coligonucleotide. Specifically, the siNAs include short interfering RNA CC (siRNA), The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits cof siNA; and vectors that express siNA. The siNAs are used to modulate correspond to the c-fos gene in cells, tissue explants or organisms compressed in or in grafts and transplants for the central nervous system lesions and injuries (e.g., Aliheimer's disease, Huntington's disease, policys, dementia or complexes (composition also relateration); autoimmune diseases; viral infections (including HIV infection); autoimmune diseases; viral infections (including HIV infection); cand/or allergic diseases; viral infections (including HIV infection); composition, and gene mapping (e.g., of single nucleotide polymorphisms).

CC targeted double-stranded siNA, which is identical to the c-fos transcript
target sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          that downregulates expression of the SCD (stearoyl-CoA desaturase) gene
CC by RNA interference, Also described: (1) modulating expression of SCD
CG enes in cells, tissue explants or organisms by introduction of sinA; (2)
CC kits for in vitro or in vivo delivery of sinA; (3) conjugates and/or
CC complexes of sinA; and (4) vectors that express sinA. SCD inhibiting
CC sinAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and
CC virucide activities. The sinNa can be used to modulate expression of SCD
CC genes, in cells, tissue explants or organisms, e.g. for treating obesity;
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC diabetes (types I and II); atherosclerosis; cancer and viral infections.
CC They can also be used for drug screening; diagnosis; target
CC studying gene function and gene mapping (e.g. of single-nucleotide
CC polymorphisms). The present sequence represents an SCD sinA, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                        The present invention describes a short interfering nucleic acid (siNA) CC that downregulates expression of the SCD (stearcyl-CoA desaturase) gene CC by RNA interference. Also described: (1) modulating expression of SCD CC genes in cells, tissue explants or organisms by introduction of siNA; (2) tits for in vitro or in vivo delivery of siNA; (3) conjugates and/or CC complexes of siNA; and (4) vectors that express siNA. SCD inhibiting CC siNAs have anorectic, antidiabetic, antiarteriosclerotic, cytostatic and virucide activities. The siNAs can be used to modulate expression of SCD CC genes, in cells, tissue explants or organisms, e.g. for treating obesity; CC diabetes (types I and II); atherosclerosis; cancer and viral infections. CC flerotication and und validation; genetic engineering; pharmacogenomics; studying gene function and gene mapping (e.g. of single-nucleotide colymorphisms). The present sequence represents an SCD siNA, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                               Query Match

The invention discloses isolated PRO secreted/transmembrane polypeptides can the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptides can be used to raise can be discrive molecule to a cell expressing a PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for modulating a bloactive molecule to a cell expressing a PRO polypeptides are useful for modulating the biological activity of a cell. PRO polypeptides are useful for modulating the biological activity of a cell expressing PRO polypeptides are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides are useful for stimulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or polyment of endothelial for stimulating the proliferation of the property of neonatal than the property of the property of the proliferation of the property of the survival or proliferation of stimulated T-lymphocytes, enhancing the survival or proliferation of cells, modulating plucose or PRA uptake, inducing c-fos in endothelial cells, modulating glucose or PRA uptake, inducing proliferation and/or recells, modulating plucose or PRA uptake, inducing proliferation and/or redifferentiation of chondrocytes. In particular, these are useful for cells, modulating plucose or PRA uptake, inducing proliferation and/or redifferential disorders or injuries or sight due to retain the protein of chondrocytes. In particular, these are useful for cells, modulating uses of sight due to retain the protein of chondrocytes. In particular, these are useful for a hypoingulinatination of genes which have a role in cell death. The polymucleotides or expression of genes which have a role in cell death. The polymucleotides of and bna, for preparing PRO polypeptides, for generating transgenic of the proteins are useful as molecular marker for generating transgenic of the proteins are useful as molecular marker for protein electro

                            The present invention describes a double-stranded short interfering nucleic acid (siNA) that downregulates expression of the vascular endothelial growth factor receptor (VEGFR) gene. Also described: (1) a siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors that express siNA; and (5) single-stranded siNA with similar properties
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          short interfering nucleic acid; siNA; downregulation; vascular endothelial growth factor receptor; VEGFR; antiangiogenic; cytostatic; antidabetic; ophthalmological; antiarthritic; antipsoriatic; nephhrotropic; gynaecological; angiogenesis-associated condition; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20-FEB-2003;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          arthritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 double-stranded short interfering nucleic acid; short interfering nucleic acid; shNA; downregulation; short interfering nucleic acid; shNA; downregulation; vascular endothelial growth factor receptor; VEGPR; antianglogenic; cytostatic; antidiabetic; ophthalmological; antiarthritic; antipsoriatic; nephrotropic; gynaecological; angiogenesis-associated condition; cancer; diabetic retinopathy; macular degeneration; neovascular glaucoma; arthritis; psoriasis; endometriosis; angiofibroma; polycystic kidney disease; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ophthalmological, antiarthritic, antipsoriatic, nephrotropic and gynaecological activities. The siNA are useful for modulating the expression of VEGFR genes. The siNA are potentially useful for treating a wide range of angiogenesis-associated conditions, particularly cancers, diabetic retinopathy, macular degeneration, neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma, and polycystic kidney disease. The siNA may also be useful for diagnosis, drug screening, target identification and validation, genetic engineering, studying gene function, and also for gene mapping (e.g. of single-nucleotide polymorphisms). The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    12-FEB-2004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a double-stranded short interfering conucleic acid (siNA) that downregulates expression of the vascular cendothelial growth factor receptor (VEGFR) gene. Also described: (1) a cisNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors that express siNA; and (5) single-stranded siNA with similar properties. The siNAs have antiangiogenic, cytostatic, antidiabetic, ophthalmological activities. The siNA are useful for modulating compensating the expression of VEGFR genes. The siNA are potentially useful for treating a wide range of angiogenesis-associated conditions, convascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma, and polycystic kidney disease. The siNA may also be useful for diagnosis, darge screening, target identification and validation, genetic engineering, studying gene function, and also for gene mapping (e.g. of single-nucleotide polymorphisms). The present sequence is used in the exemplification of the present invention.

BCL2 gene

The invention relates to a novel short interfering nucleic acid (siNA) that downregulates expression of the BCL2 gene by RNA interference. A siNA of the invention has cytostatic, immunosuppressive, virucide, and

Example 3; SEQ ID NO 122; 148pp; English.

A sINA of the invention has cytostatic, immunosuppressive, virucide, and anti-HIV activity. The siNA are useful for modulation (inhibition) of expression or activity of BCL2 by RNA interference. siNA are used to modulate expression of BCL2 genes, in cells, tissue explants or organisms, e.g. for treating cancer, autoimmune diseases and viral infections (including by HIV) but also for drug screening, diagnosis, target identification and validation, genetic engineering, pharmacogenomics, studying gene function and gene mapping (e.g. of single nucleotide polymorphisms). The sequences shown in ADF49273-ADF50143 represent siNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ss; siNA; human; BCL2; short interfering nucleic acid; RNA interference; cytostatic; immunosuppressive; virucide; anti-HIV; cancer; autoimmune disease; viral infection; HIV.

                                                                                               This invention relates to novel isolated polynucleotides that confer resistance against late blight caused by the comycete pathogen Phytophthora infestans, which threatens both tomato and potato crops. Specifically, it refers to a gene cluster (namely Rpi-bbb) that encodes leucine-rich repeat (LRR) proteins identified in Solanum bulbocastanum, and which cause disease resistance to bacteria, fungi, nematodes etc. These R genes, namely Rpi-bbb, RGC1-bbb, RGC3-bbb and RGC4-bbb, can be described as plant growth regulants. They are useful in providing resistance to Phytophthora infestans, especially in Solanum tuberosum (potato) plants to protect against comycete infection or to demonstrate disease susceptibility. Resistance conferred by transformation of cexisting potato and tomato cultivars with the gene, a procedure that is onlyonucleotide sequence is a PCR primer used as a marker for the Solanum bulbocastanum said-the conferred as a marker for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             anti-HIV activity. The siNA are useful for modulation (inhibition) of expression or activity of BCL2 by RNA interference. siNA are used to modulate expression of BCL2 genes, in cells, tissue explants or organisms, e.g. for treating cancer, autoimmune diseases and viral infections (including by HIV) but also for drug screening, diagnosis, target identification and validation, genetic engineering, pharmacogenomics, studying gene function and gene mapping (e.g. of single nucleotide polymorphisms). The sequences shown in ADF49273-ADF50143 represent siNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New resistance gene conferring resistance against an oomycete pathogen, useful for producing plants, especially potatoes and tomatoes, resistan against oomycete pathogens such as Phytophthora infestans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-FEB-2002; 2002EP-00075565

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
The invention relates to short interfering nucleic acids (siNA) which CC downregulate expression of the human insulin-like growth factor 1 creceptor (IGF-IR) gene by RNA interference. The siNAs may or may not CC comprise ribonucleotides and may be double or single stranded. They CC further comprise sense and antisense regions, or alternatively are CC assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), doublestranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs Can be unmodified or chemically modified, can contain contain deoxyribonucleotides, and can be chemically synthesised, expressed from a coetor or enzymatically synthesised. The invention also relates to kits of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the IGF-IR gene in cells, tissue explants or organisms
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20-FEB-2002; 2002US-0358580P.

They may be used for treating cancer and other proliferative diseases (e.g., restenosis and polycystic kidney disease), inflammatory and/or allergic diseases, autoimmune diseases and transplant rejection. The sinks are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 19

downregulate expression The invention relates to short

얁

the

interfering human insuli

fering nucleic acids insulin-like growth

(siNA)

which

The invention relates to a method of promoting or suppressing cell proliferation by increasing or decreasing paternally expressed gene 10 (PEG10) protein levels, and suppressing or promoting cell death by increasing or decreasing PEG10 protein levels in the cell. The method is useful for promoting or suppressing cell proliferation or cell death.

The method is

Promoting or suppressing cell proliferation by increasing or decreasing paternally expressed gene 10 (PEG10) protein levels.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             deoxyribonucles, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNh; conjugates and/or complexes of siNh, and vectors that express siNh. The siNhs are used to modulate expression of the IGF-IR gene in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating cancer and other proliferative diseases (e.g., restenosis and polycystic kidney diseases, inflammatory and/or allergic diseases, autoimmune diseases and transplant rejection. The siNhs are also useful for drug screening, diagnosis, therapeutic target identification and validation, genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the upper strand of a human IGF-IR-targeted double-stranded siNh, which is identical to the IGF-IR transcript target sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                preferably, the method is useful for promoting or suppressing proliferation or death of cancer cell, preferably liver cancer cell e.g., hepathoma cell. A pharmaceutical composition is useful for treating or preventing cell proliferative diseases. The diagnosing method and the diagnostic reagent are useful for diagnosing hepatic carcinoma, preferably hepatoma. The present sequence is used in the exemplification
The invention relates to short interfering nucleic acids (sinA) which downregulate expression of the one or more telomerase genes by RNA interference. The sinAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the sinAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cytostatic; vasotropic; protozoacide; immunosuppressive; dermatological; neuroprotective; anti-HIV; ophthalmological; antiulcer; antirheumatic; antiarthritic; antiinflammatory; gene therapy; telomerase; human; terc; RNA interference; short interfering nucleic acid; siNA; short interfering RNA; siRNA; double-stranded RNA; micro-RNA; miRNA; short hairpin RNA; shRNA; expression modulation; gene therapy; drug screening; diagnosis; therapeutic target identification; harmans comments.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express sinA. The siNAs are used to modulate expression of the telomerase genes in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating cancer, restenosis, infectious diseases (specifically protozoal), transplant rejection, or autoimmune or age-related diseases, e.g. multiple sclerosis, lupus erythematosus, AIDS, macular degeneration, skin ulcers and rheumatoid arthritis. The siNAs are also useful for drug screening, diagnosis, therapeutic target identification and validation, and gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cytostatic; vasotropic; protozoacide; immunosuppressive; dermatological; neuroprotective; anti-HIV; ophthalmological; antiulcer; antirheumatic; antiarthritic; antiinflammatory; gene therapy; telomerase; human; terc; RNA interference; short interfering nucleic acid; siNA; short interfering RNA; siRNA; double-stranded RNA; micro-RNA; miRNA; short hairpin RNA; shRNA; expression modulation; gene therapy; drug screening; diagnosis; therapeutic target identification;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the lower strand of a human TERT-targeted double-stranded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                26-FEB-2004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to short interfering nucleic acids (siNA) which CC downregulate expression of the one or more telomerase genes by RNA CC interference. The siNAs may or may not comprise ribonucleotides and may be double or single stranded. They further comprise sense and antisense CC regions, or alternatively are assembled from a sense oligonucleotide and cCC an antisense oligonucleotide. Specifically, the siNAs include short CC interfering RNA (siRNA). The siNAs can be unmodified or chemically modified, CC can contain deoxyribonucleotides, and can be chemically synthesised, CC can contain deoxyribonucleotides, and can be chemically synthesised, CC expressed from a vector or enzymatically synthesised. The invention also CC relates to kits for the in vitro or in vivo delivery of siNA; conjugates CC and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the telomerase genes in cells, tissue CC explants or organisms (e.g., by ex vivo gene therapy), or in grafts and CC transplants for the treatment of a variety of conditions. They may be used for treating cancer, restenosis, infectious diseases (specifically protozoal), transplant rejection, or autoimmune or age-related diseases, e.g. multiple sclerosis, lupus erythematosus, AIDS, macular degeneration, skin ulcers and rheumacoid arthritis. The siNAs are also useful for drug genetic engineering, pharmacogenomics, studying gene function, and gene represents the upper strand of a human TERT-targeted double-stranded corresponded to the c-fos transcript target sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The siRNA of the invention demonstrates cytostatic activity and may be useful for modulating expression of the BCR-ABL gene, as well as for treating leukaemia or lymphoma and in diagnosis, drug screening, target identification and validation, genetic engineering, gene function studies and gene mapping. The current sequence is that of the human ABL1-targeted siRNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       short interfering nucleic acid; siNA; breakpoint cluster region; v-abl Abelson murine leukaemia viral oncogene homologue 1; BCR-ABL; cytostatic; leukaemia; lymphoma; human; ss; siRNA; ABL1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel double-stranded short interfering nucleic acid (siNA) that downregulates expression of the breakpoint cluster region-v-abl Abelson murine leukaemia viral oncogene homologue 1 (BCR-ABL) gene. The siNNA of the invention demonstrates cytostatic activity and may be useful for modulating expression of the BCR-ABL gene, as well as for treating leukaemia or lymphoma and in diagnosis, drug screening, target identification and validation, genetic engineering, gene function studies and gene mapping. The current sequence is that of the human ABL1-targeted siRNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human secreted/transmembrane protein, #53, PCR primer #1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC cells, modulating glucose or FFA uptake, inducing proliferation and/or redetecting or treating cardiac insufficiency disorders, wounds, cancerous cc tumours, retinal disorders or injuries (e.g. loss of sight due to cretinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, or bome or cartilage disorders (e.g. sports injuries or carthitis) in manmals. PRO polypeptides and their portions affect the carbonistis or inducing proliferation probes cc arthritis) in manmals. PRO polypeptides and their portions affect the cexpression of genes which have a role in cell death. The polymucleotides are useful in molecular biology including uses as hybridisation probes cf or cDNA; increased the full-length PRO cDNA or to isolate other cDNAs, in chromosome and gene mapping, in the generation of antisense RNA cc and DNA, for preparing PRO polypeptides, for generating transgenic creening of therapeutically useful reagents, as probes and for the genetic analysis of individuals with genetic disorders as well as for creening to the rapeutic agents, for genetic disorders as well as for cc genetic analysis of individuals with genetic disorders as well as for the proteins are useful as molecular marker for protein electrophoresis purposes, as therapeutic agents, for screening compounds to identify c the PRO polypeptide (agonists) or prevent the effect of the PRO polypeptide (antagonists). The polymucleotides and proteins are useful for tissue typing. PRO antibodies are useful for c immunohistochemical staining and/or assay of sample fluids. Anti-PRO c immunohistochemical staining and/or assays for PRO e.g. detecting its c expression in specific cells, tissues or serum and for affinity c expression in specific cells, tissues or serum and for affinity and defective gene. The sequence presented is a PCR primer which was used to camplify a PRO polymucleotide of the invention.
                                                                                                         RESULT 1509
                                                                                                                                                                                                                                                                                                                                                     Best Loc

PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bloactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides. The PRO polypeptides or polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothelial growth factor (VEGP) stimulated proliferation of endothelial cells, modulating the proliferation of stimulated T-lymphocytes, enhancing the survival or proliferation of retinal neurons or rod photoreceptor cells, inducing c-fos in endothelial cells and the proliferation of stimulated T-lymphocytes, enhancing the survival or proliferation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a

disease, ent ulceration, olated native PRO polypeptide useful for treating Parkinson's enterocolitis, Zollinger-Ellison syndrome gastrointestinal on, Alzheimer's disease, amyotrophic lateral sclerosis, Usher

Example 42; SEQ ID NO 286; 471pp; English.

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise antibodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO protein and for modulating at least one biological activity of a cell. PRO polypeptides are useful for detecting other PRO polypeptides in a sample and for linking a bioactive molecule to a cell expressing a PRO polypeptide. The PRO polypeptide antibodies are useful for modulating the biological activity of a cell expressing PRO polypeptides or polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. These are useful for stimulating hypertrophy of neonatal heart, inhibiting vascular endothelial growth factor (VEGF)-stimulated

8888888888888888888888888888888888888 CC proliferation of endothelial cells, modulating the proliferation of continuated T-lymphocytes, enhancing the survival or proliferation of cells, modulating glucose or FFA uptake, inducing c-fos in endothelial cells, modulating glucose or FFA uptake, inducing c-fos in endothelial cells, modulating glucose or FFA uptake, inducing proliferation and/or recells, modulating of chondrocytes. In particular, these are useful for detecting or treating cardiac insufficiency disorders, wounds, cancerous tumours, retinal disorders or injuries (e.g. loss of sight due to creinitis pigmentosum), obesity, diabetes, hyperinsulinaemia, or bone or cartilage disorders (e.g. sports injuries or compositional propertions affect the cexpression of genes which have a role in cell death. The polymucleotides care useful in molecular biology including uses as hybridisation probes care useful in molecular by properting, in the generating transgenic composed and gene mapping, in the generation of antisense RNA composed and gene mapping, in the generation of antisense RNA composed and gene mapping, in the development and composed of therapeutically useful reagents as probes and for the composed composed and gene mapping, in the generation of antisense RNA composed of therapeutically useful reagents as probes and for the composed composed and gene mapping, in the development and composed to antise to a propertie and for chomosed destrict analysis of individuals with genetic disorders as well as for composed and proteins are useful as molecular marker for protein electrophoresis composes, as therapeutic agents, for screening compounds to identify the proteins are useful in diagnostic assays of sample fluids. Anti-PRO cantibodies are useful in diagnostic assays of sample fluids. Anti-PRO cantibodies are useful in diagnostic assays of sample fluids. Anti-PRO cantibodies are useful in diagnostic assays of sample fluids. Anti-PRO cantibodies are useful in diagnostic assays of sample fluids. Anti-PRO cantification of PRO form recombinant cell cul

The method and compositions of the invention may be useful for analysing mutation and diagnosing patients affected with PKD (polycystic kidney disease). The current sequence is that of a PCR primer of the invention which was used to amplify human polycystic kidney disease PKD-1 DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; PRO; primer; ss; secreted polypeptide; transmembrane polypeptide; pathological disorder; cardiac insufficiency disorder; protein secretion; pancreas; diabetes; gastrointestinufficiency amucosal lesion; psoriasis; skin disease; keratinocyte differentiation; epithelial cancer; tumour; lung squamous cell carcinoma; epidermoid carcinoma; vulva; glioma; PCR; cytostatic; cardiant; endocrine; antidiabetic; gastrointestinal;

The CC transmembrane polypeptides) and the polynucleotides encoding them. The CC disorders and tumours, in therapeutic treatment of cardiac insufficiency CC disorders and in therapeutic treatment of cardiac insufficiency CC disorders and in therapeutic treatment of cardiac insufficiency CC disorders and in therapeutic treatment of cardiac insufficiency CC treating disorders associated with the preservation and maintenance of CC gastrointestinal mucosa and the repair of acute and chronic mucosal CC lesions, and skin diseases associated with abnormal keratinocyte CC differentiation (e.g., psoriases, epithelial cancers such as lung CC squamous cell carcinoma, epidermoid carcinoma of the vulva and gliomas). CC The sequences can be used as molecular markers for protein binding CC electrophoresis purposes and can be utilised in protein-protein binding CC assays, biochemical screening assays, immunoassays and cell-based assays. This sequence represents a PCR primer used to isolate a human PRO CC polynuclectide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to the isolation of novel human secreted CC and transmembrane proteins (PRO polypeptides), and the polynucleotide CC sequences encoding them. The polynucleotide sequences are useful in CC molecular biology, as hybridisation probes, in chromosome and gene CC mapping, in generating antisense RNA and DNA, and in gene therapy. The polynucleotide sequences may also be used in preparing PRO polypeptides CC by recombinant techniques, and in generating either transgenic animals or Knock-out animals which, in turn, are useful in the development and CC screening of therapeutically useful reagents. The PRO polypeptides or C their antibodies are useful in preparing a medicament for treating a CC condition responsive to the polypeptide or antibody, such as cancer, CA lzheimer's disease or ischaemia, and in various diagnostic assays. The C present sequence represents a PCR primer used in the examples of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

Þ

The invention discloses isolated PRO secreted/transmembrane polypeptides and the nucleic acid encoding them. The polypeptides can be used to raise cantibodies that specifically bind to the PRO polypeptide, for linking a bloactive molecule to a cell expressing a PRO provein and for modulating at least one biological activity of a cell. PRO polypeptides for modulating complete the properties are useful for detecting other PRO polypeptides in a sample and for inking a bloactive molecule to a cell expressing a PRO polypeptide. The PRO collection of the cell expressing PRO polypeptides or polypeptide and for modulating the biological activity of a cell expressing a PRO polypeptides or polypeptide and the properties or polypeptide are useful for modulating the biological activity of a cell expressing PRO polypeptides or polypeptides or polypeptide are useful for stimulating hypertrophy of meonatal heart, inhibiting vascular endothelial growth factor (VEGP)-stimulated proliferation of endothelial cells, inducing proliferation of cells, modulating the proliferation of cells, modulating the proliferation of sports injuries or detecting or treating cardiac insufficiency disorders, wounds, cancerous cells, inducing cells in and/or respective sets or cells, insufficiency disorders as hybridisation probes or cells, insufficiency disorders as hybridisation probes or cells, insufficiency disorders as well as PRO genes may also be used in gene therapy, particularly for replacing defective gene. The sequence presented is a PCR primer which was used t amplify a PRO polynucleotide of the invention. was used to

Example 3; SEQ ID NO 87; 141pp; English.

The invention relates to short interfering nucleic acids (siNA) which CC downregulate expression of the human gastric inhibitory polypeptide (GIP) CC or the GIP receptor (GIP) gene by RNA interference. The siNAs may or may CC further comprise ribonucleotides and may be double or single stranded. They CC further comprise sense and antisense regions, or alternatively are CC assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNas include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (siRNA). The siNAs C can be unmodified or chemically modified, can contain CC can be unmodified or chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits C for the in vitro or in vico delivery of siNA; conjugates and/or complexes CC for the invertor that express siNA. The siNAs are used to modulate CC expression of the GIPr gene in cells, tissue explants or organisms (e.g., Dy ex vivo gene therapy), or in grafts and transplants for the treatment CC by ex vivo gene therapy), and should be used for treating treating treating, diagnosis, therapeutic target identification and validation, and gene genetic engineering, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the upper strand of a human GIPr-targeted double-stranded siNA, which is identical to the GIPr transcript target sequence.

                The invention relates to short interfering nucleic acids (siNA) which CC downregulate expression of the human gastric inhibitory polypeptide (GIP) or the GIP receptor (GIP) gene by RNA interference. The siNAs may or may contromprise ribonuclectides and may be double or single stranded. They CC further comprise sense and antisense regions, or alternatively are assembled from a sense oligonucleotide and an antisense oligonucleotide. Specifically, the siNAs include short interfering RNA (siRNA), double-cC stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs cC an be unmodified or chemically modified, can contain c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted nucleic acids associated with lung airway or lung dysfunction, and bronchodilating agent. ç

Claim 15; SEQ ID NO 3936; 763pp; English.

This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, beta-adrenergic analgesic, hypotensive, immunosuppressive and cytostatic activity, is a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The comprises and/or bronchoconstriction and/or lung confilmantion, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, condition such as pulmonary vasoconstriction, condition such as pulmonary vasoconstriction, confilmantion, allergies, asthma, impeded respiration, respiratory confirmation, emphysema, chronic obstructive pulmonary disease, pulmonary contransion, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to configuration the prevent in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system content of the anti-sense oligonal products that free adenosine into the system content of the prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Best Local Similarity
